Overview

Here we present the results of the last postal survey carried out in **2020** at the residential centers for the elderly in Spain. This survey is carried out biannually and its objective is to update the CSIC Health Portal database. All records are georeferenced and will be displayed on the maps based on the Spatial Data Infrastructure of the CSIC Health Portal, an open platform that is under development and aims to complete the information on health resources and elderly care in Spain.

The **2022** survey was sent to more than **5,600** residences for the elderly and is currently being processed. These results will be available by the end of 2022.

Approach

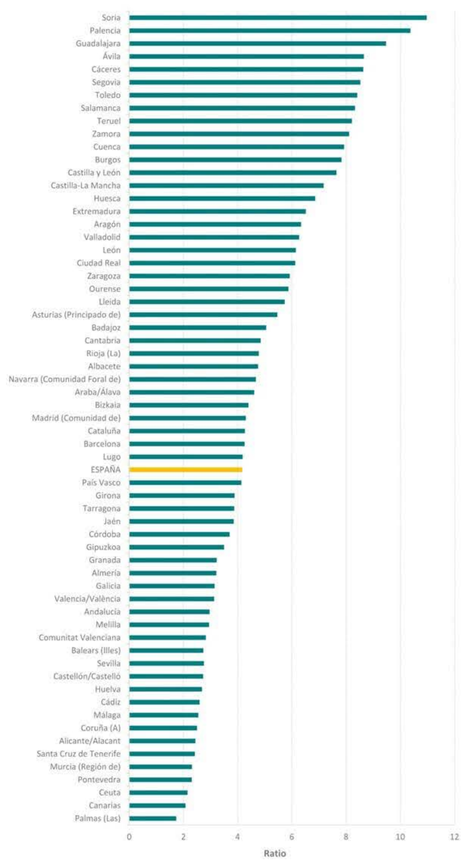

A postal survey was sent to **5,567** residences for the elderly in Spain with pre-filled information for the residences to complete or modify (**September 2020** as suggested reference date). **68%** of the participants responded between September and December 2020 (closing date for the data collection). Nevertheless, the forms continue to arrive and are subsequently included in the database. In case of not having received a response to this survey, the information obtained in the last survey is maintained.
